

Joining a Zoom meeting from an Android device

- with Zoom already installed on the device -

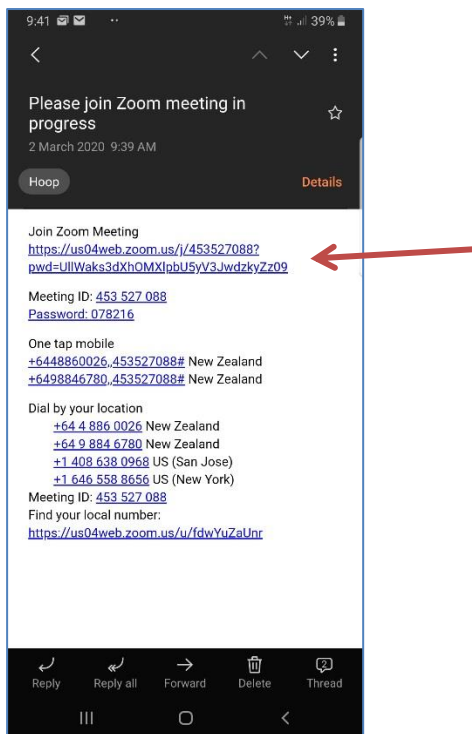

IMPORTANT: If you haven't already installed Zoom please do so first before joining any meetings.

Download the On-Line Guide "[Android - downloading and installing ZOOM.pdf](#)"

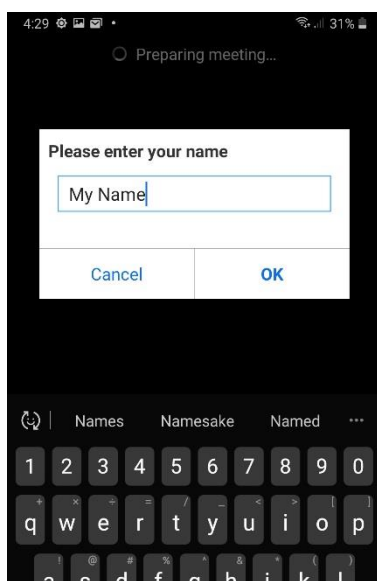

... for step by step instructions on how to do that.

NOTE: After the first meeting not all these steps will be required. In that case just skip to the next step.

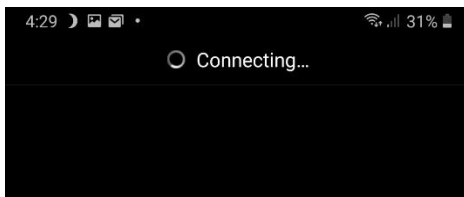

- 1) Open the **email inviting** you to the meeting. It will have a link to the meeting in it. Tap on the **link**.

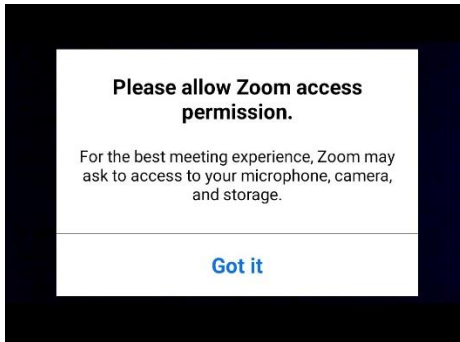

- 2) You'll be asked to enter your name. Type it in. It will be remembered for subsequent meetings, although you will always have the option of changing it for a particular meeting. Tap on **OK**.

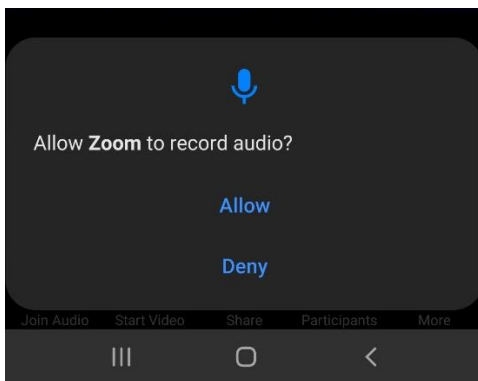

3) You'll see Zoom connecting...

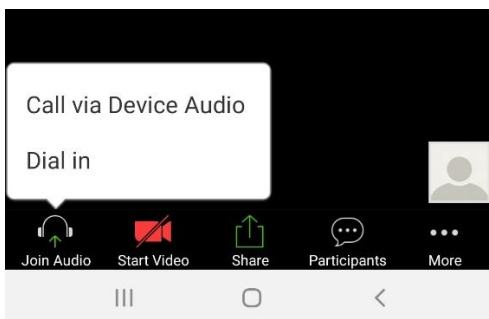

4) For the first meeting Zoom will let you know it will be needing permissions. Just tap on **Got it**.

5) Zoom will ask you at the first meeting for permission to record audio on your device. Tap on **Allow**.

6) You'll be asked if you want to call using the device's audio. Tap on **Call via Device Audio**.

7) You will then be in the meeting. You'll see the meeting screen, with the screen showing the meeting host.
